

# Roadmap to Success with Microsoft Azure

Matouš Rokos  
Chief Cloud Solutions Architect  
Atea

# Agenda

- Where to Start
- Tools?
- Details

1

## Discover

- VMs
- Physical Servers
- VNETs
- Load Balancers
- Firewalls
- Roles
- Dependencies
- TCO
- ROI

2

## Migrate

- Prepare pre-reqs.
  - Networking
  - Resource Groups
  - RBAC
- Replicate
- Deliver
- VMs
- VM Scale Sets
- Managed Instances

3

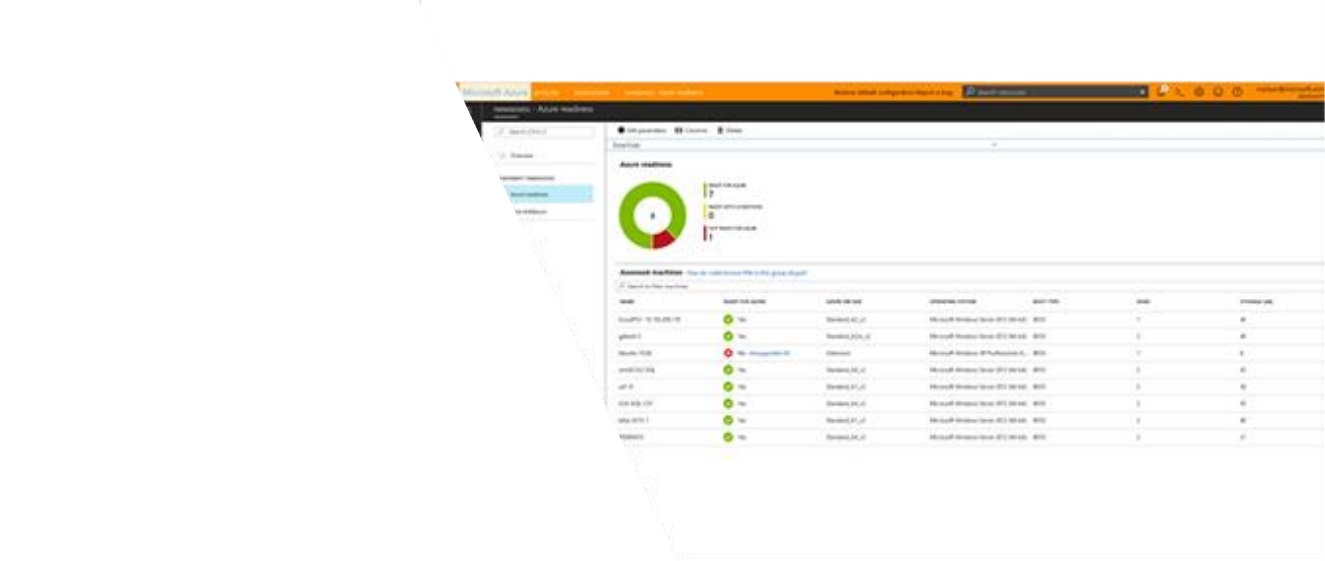

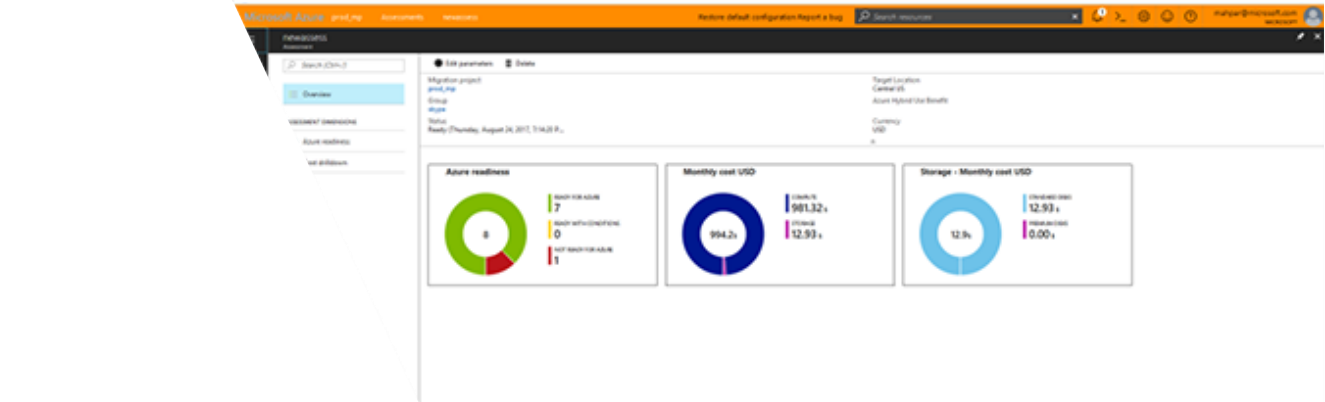

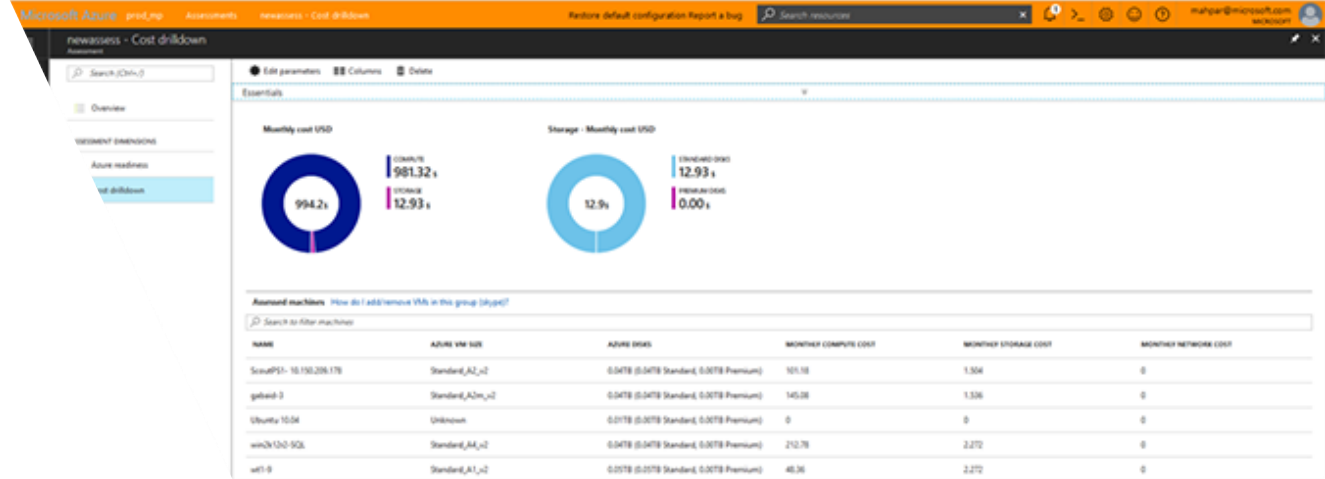

## Optimize

- From VMs to Services
  - Containers
  - Microservices
  - App Services
  - DBs

# Azure Migrate

Guidance, insights and mechanisms for cloud migration

- Discover
- Dependency mapping
- Right-sizing for Azure virtual machines
- Compatibility reporting with guidelines for potential issues
- Migrates workloads

# Data Migration

## SQL Server OnPrem

- ✓ No Migration or changes
- ✓ Hybrid Scenarios
- × Setup VPN or Express Route for mission control workloads
- × Network Latency

## SQL Server on Azure VM's (IaaS)

- ✓ Fast migration with minimal changes
- ✓ Eliminates hardware costs
- ✓ Hybrid deployment available
- × Manual Patching, Scaling and HA

Azure Database Migration Service

## Azure SQL DB Managed Instance (PaaS)

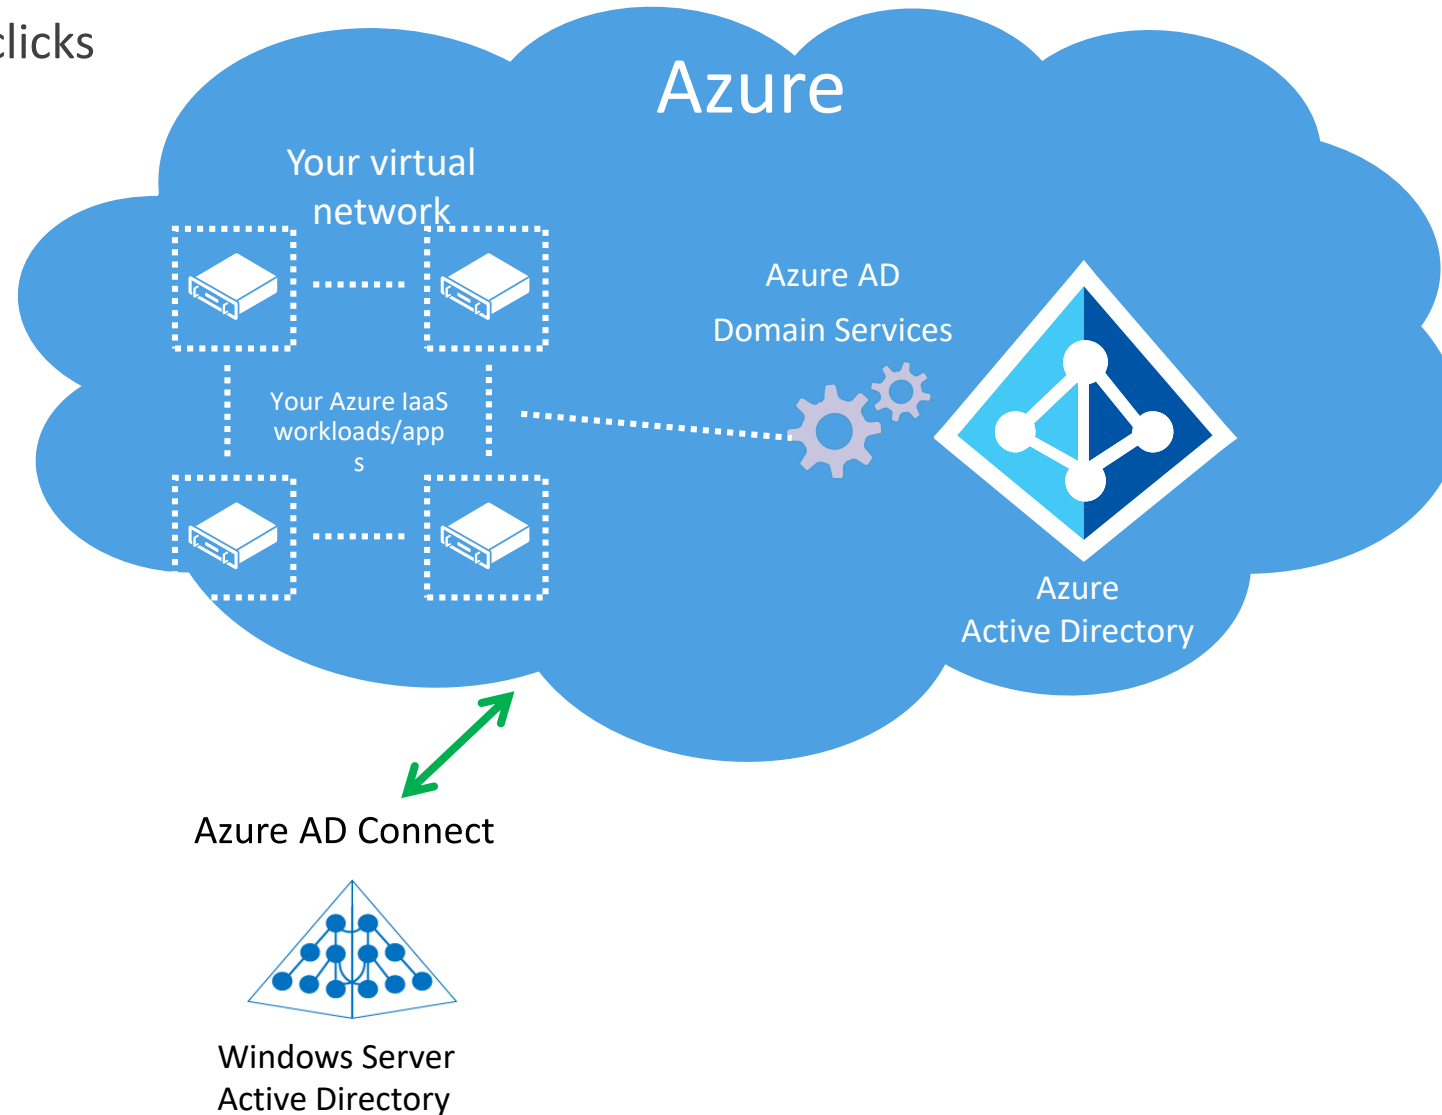

- ✓ Built-in HA, Scaling, Upgrades
- ✓ VNET support for private IP address
- ✓ Eliminates hardware & administrative costs

Azure Database Migration Service

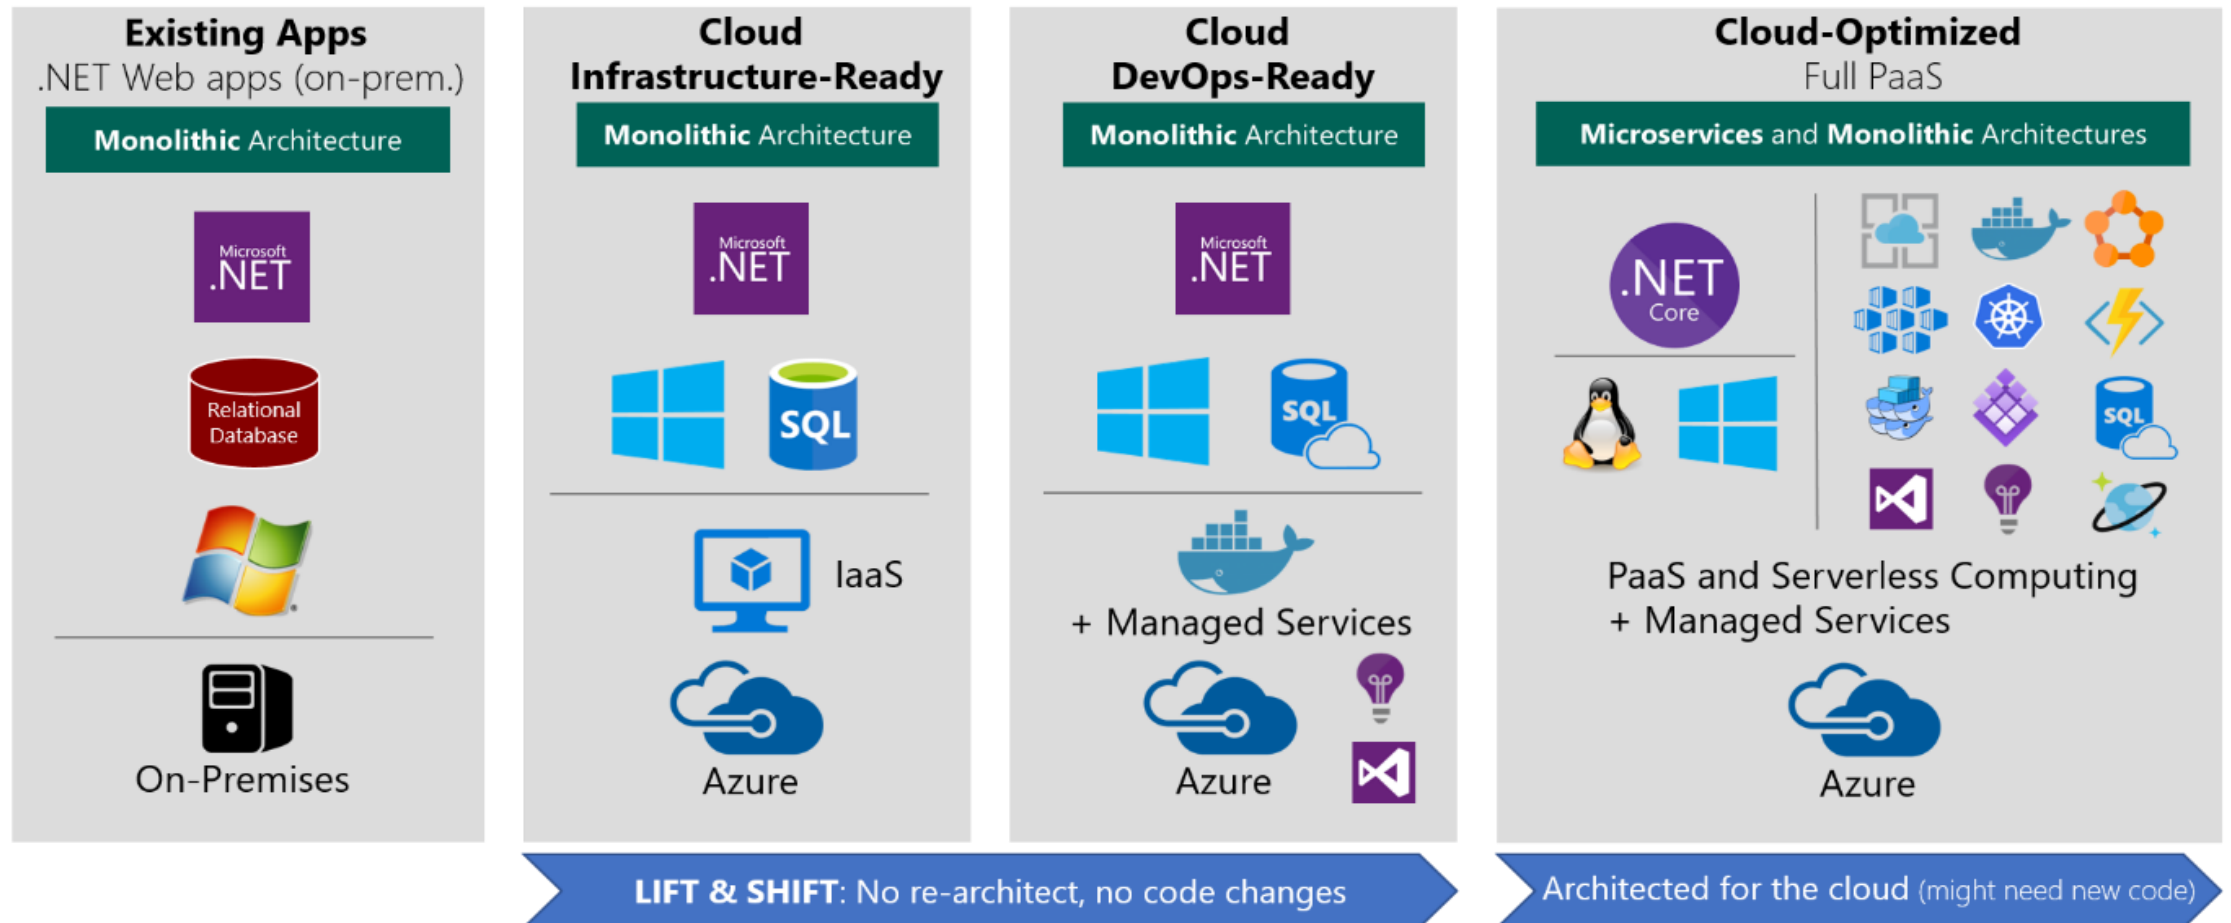

# Managing Identity

- Enable Azure AD Domain services in a few clicks
- Users, passwords and groups sync'd from Azure AD tenant
- Reflection of Azure AD

# Optimize

## Existing .NET Application Modernization: Maturity Models

Thanks

Most Important?

We can help you out!
